INVESTMENT STRATEGIES

AIG India Equity Fund	<p>The Scheme would invest predominantly in a diversified portfolio constituting equity and equity related instruments of companies that the fund manager believes have sustainable business models, and potential for capital appreciation.</p> <p>The Scheme would follow an actively managed approach allowing it the flexibility to pursue opportunities across the entire market capitalization spectrum, from smaller companies to well-established large-cap companies, without having any bias in favour of sectoral allocations or market capitalization. The investment environment, valuation parameters and other investment criteria will determine the allocation and the investment style.</p>
AIG India Liquid Fund	<p>This scheme is meant for investors to deploy their funds for a short period of time. The fund will be managed according to the investment objective, thereby seek to generate reasonable returns commensurate with low risk. The scheme will invest in money market and other short term debt securities and shall maintain high liquidity for the purpose of meeting the liquidity requirements of the investors.</p> <p>The credit quality of the portfolio will be maintained and monitored using in-house research capabilities as well as inputs from external sources such as independent credit rating agencies. The investment team will primarily use a bottom up approach to assess the quality of the security / instrument (including the financial health of the issuer) as well as the liquidity of the security.</p> <p>Investments in debt instruments carry various risks such as interest rate risk, liquidity risk, default risk, reinvestment risk etc. Whilst such risks cannot be eliminated, they may be minimized through diversification and effective use of hedging techniques.</p>
AIG India Treasury Fund	<p>This scheme is meant for investors to deploy their funds for a short period of time. The fund will be managed according to the investment objective, thereby seek to generate reasonable returns commensurate with low risk. The scheme will invest in money market and other debt securities and shall maintain moderate to high liquidity for the purpose of meeting the liquidity requirements of the investors.</p> <p>The investment team of the AMC will take an active view on the key drivers affecting short term interest rate scenario as well as liquidity. This will include various parameters of the Indian economy, as well as developments in global markets.</p> <p>Investment views / decisions will be a combination of credit analysis of individual exposures, analysis of macroeconomic factors and other relevant factors to estimate the direction of interest rates and level of liquidity, in an attempt to optimize the risk adjusted returns on the portfolio.</p> <p>The credit quality of the portfolio will be maintained and monitored using in-house research capabilities as well as inputs from external sources such as independent credit rating agencies. The investment team will primarily use a bottom up approach to assess the quality of the security / instrument (including the financial health of the issuer) as well as the liquidity of the security.</p> <p>Investments in debt instruments carry various risks such as interest rate risk, liquidity risk, default risk, reinvestment risk etc. Whilst such risks cannot be eliminated, they may be minimized through diversification and effective use of hedging techniques.</p>
AIG Infrastructure and Economic Reform Fund	<p>India's rapid economic development and urbanization has led to an ever-increasing need to provide basic infrastructure - particularly power, telecom, water, housing, sanitation, solid waste management, roads and urban transport including airports, ports, waterways etc. Urban roads are inadequate to meet growing traffic requirements. The number of vehicles in India has increased 80-fold over the last 40 years but road length has increased by only 5%#. Efficient roadway and urban transit networks are integral to the country's continued economic development. The housing shortage in India is estimated to be in the range of nearly 40 million dwelling units. India faces chronic power shortages due to underdeveloped generation capacity as well as a porous and inefficient transmission and distribution network. Teledensity in spite of recent strides in increasing subscriber population still is low compared to the developed world.</p> <p><i># According to Mr M Rajamani, Joint Secretary to the government of India, Ministry of Urban Development, at the 2nd Conference on financing municipalities and sub-national governments, Washington DC, September 2004.</i></p> <p>India has embarked upon an ambitious economic reform program aimed at correcting these imbalances and ensuring a balanced growth for all sections of the population on a sustained basis. Economic reform has also led to increased requirements of various goods and services essential for the sustained growth envisaged by various estimates of GDP growth.</p> <p>The financial resources required to expand these basic amenities are enormous, resulting in a significant resource gap that cannot be met from traditional central and state government grants and loans. Recognition of this funding gap has resulted in a near-universal acceptance that the private sector can and should play a larger role in the financing of infrastructure in partnership with the public sector.</p> <p>This growing area will potentially throw up a vast array of opportunities for investors. The AIG Infrastructure and Economic Reform Fund will invest primarily in equity and equity related instruments either through primary or secondary purchases of companies involved in this development as a result of such potential investments in infrastructure and unfolding economic reform to take advantage of this opportunity as it appears on the economic landscape of India.</p> <p>Under normal market conditions and depending on the fund manager's views, the assets of the Scheme would be invested across stocks that represent a broad range of sectors of the economy as mentioned below in order to ensure adequate portfolio diversification:</p> <ul style="list-style-type: none"> (i) Infrastructure: Infrastructure companies operating in but not limited to power, oil and gas, telecom, water, housing, real estate, construction, roads, ports, airports, shipping & shipping building, logistics, etc. and sectors that will benefit from the development in infrastructure such as but not limited to cement, metals, capital goods and banking and financial services. (ii) Economic reform oriented: Companies in sectors that will benefit from the on-going liberalization in the Indian economy including relaxation in foreign exchange controls, FDI in banking and financial services and any other industry or sector where there is a trend to moving toward a freer market based model like retail, media and entertainment, mining, etc. <p>The fund manager may use selective derivative strategies with a view to optimize the overall performance of the Scheme.</p>

The Scheme may, at the discretion of the Investment Manager, also invest in the units of other similar overseas mutual fund schemes. The Scheme may also invest a certain portion of its corpus in debt and money market securities and/or units of debt/liquid schemes of Mutual Funds, in order to meet liquidity requirements from time to time. It is suitable for investors who want to utilize interesting investment opportunities in the gold mining sector. RISK PROFILE OF THE SCHEMES

Mutual Fund units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific risk factors are summarised below:

AIG India Equity Fund and AIG Infrastructure and Economic Reform Fund:

- The value of the Scheme's investments may be affected by factors affecting the securities markets such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws and political, economic or other developments which may have an adverse bearing on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units of the Scheme may be affected.
- Equity securities and equity related securities are volatile and prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio.
- Investments in equity and equity related securities involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risk of losing their investment.
- The liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.
- Investments in money market instruments involve a moderate credit risk i.e. risk of an issuer's ability to meet the principal payments. Additionally, money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.
- Money market instruments may also be subject to price volatility due to factors such as changes in interest rates, general level of market liquidity and market perception of credit worthiness of the issuer of such instruments.
- The NAV of the Scheme's Units, to the extent that the Scheme is invested in fixed income securities, will be affected by changes in the general level of interest rates. When interest rates decline, the value of a portfolio of fixed income securities can be expected to rise. Conversely, when interest rates rise, the value of a portfolio of fixed income securities can be expected to decline.
- The tax benefits described in the SID of the scheme are as available under the prevailing taxation laws. Investors / Unit Holders should be aware that the relevant fiscal rules or their interpretation may change. As is the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Unit Holder is advised to consult his / her / their own professional tax advisor.
- The liquidity of the scheme is inherently restricted by trading volumes in securities in which it invest.
- Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. The AMC may choose to invest in unlisted securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio.
- Investment decisions made by the Investment Manager may not always be profitable.

Only applicable for AIG Infrastructure and Economic Reform Fund

- The Scheme will focus on companies which will benefit from structural changes brought about by continuing liberalization in economic policies by the Government and/or from continuing investments in infrastructure, both by the public and private sector. It is possible that such policies may not fructify or crystallize in a manner commensurate with expectations thereby affecting the prospects of companies held in the portfolio of the Scheme. Since, the NAV of the scheme is linked to the share price performance of such companies, they may outperform or under perform the benchmark index (BSE 100) and/or the constituents of the said benchmark index.

AIG World Gold Fund

- The value of the Scheme's investments may be affected by factors affecting the securities markets such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws and political, economic or other developments which may have an adverse bearing on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units of the Scheme may be affected.
- The Scheme intends to predominantly invest in Falcon Gold Equity Fund, which invests worldwide mainly in stocks issued by companies engaged primarily in the extraction,

processing and marketing of gold. Furthermore, up to a maximum of 25% of the assets can be invested in companies engaged in extracting, processing or marketing other precious metals, gems and colored metals. Falcon Gold Equity Fund may invest a maximum of one third of its assets into other financial instruments as defined in its prospectus. The investment objective of the Falcon Gold Equity Fund consists chiefly in achieving an appropriate level of growth.

The Falcon Gold Equity Fund is a sector fund. It is suitable for investors who want to utilize interesting investment opportunities in the gold mining sector. Due to its focus, the fund is seen as an ideal supplement in the share part of a mixed portfolio. The low correlation of gold mine shares to other securities means that the fund can also be used as an ideal diversification instrument.

The Scheme may also invest, at the discretion of the Investment Manager, a certain portion of its corpus in the debt/liquid schemes of AIG Global Investment Group Mutual Fund. Hence scheme specific risk factors of such underlying schemes will be applicable. All risks associated with such schemes, including performance of their underlying stocks, derivative instruments, stock-lending, off-shore investments etc., will therefore be applicable in the case of the Scheme. Investments in the Scheme will be subject to risk factors associated with investment in the Underlying Scheme and other underlying schemes in which the Scheme invests. All risks associated with such schemes, including performance of their underlying stocks, derivative instruments, stock-lending, off-shore investments etc., will therefore be applicable in the case of the Scheme. Investors who intend to invest in the Scheme are required to and deemed to have understood the risk factors of such underlying schemes.

- Investors in the Scheme may incur load charges on two occasions. First, on their redemptions / switches in the options under the relevant scheme(s) (including the Underlying Scheme) and second, on the Scheme's redemption / switches in the options under the underlying scheme(s) (including the Underlying Scheme).
- The winding up of the Underlying Scheme may result in winding up of the Scheme itself.
- To the extent that the underlying schemes invest in corporate debt securities, they are subject to the risk of an issuer's inability to meet interest and principal payments on its debt obligations (credit risk). Debt securities may also be subject to price volatility due to factors such as changes in credit rating, general level of market liquidity and market perception of the creditworthiness of the issuer, among others (market risk).
- To the extent that the underlying schemes are invested in fixed income securities, the NAV of the Units issued under the Scheme is likely to be affected by changes in the general level of interest rates. When interest rates decline, the value of a portfolio of fixed income securities can be expected to rise. Conversely, when interest rates rise, the value of a portfolio of fixed income securities can be expected to decline.
- The liquidity of the Scheme's investments may be inherently restricted by the liquidity of the underlying schemes in which it has invested.
- The Investors shall bear the recurring expenses of the Scheme in addition to those of the underlying schemes. Therefore, the returns that they may receive may be materially impacted or may, at times, be lower than the returns that the investors directly investing in the underlying schemes could obtain.
- The disclosures of portfolio of the Scheme will be limited to the particulars of the underlying schemes and money market securities where the Scheme has invested. Investors may, therefore, not be able to obtain specific details of the investments of the underlying schemes.
- Any change in the investment policies or fundamental attributes of any underlying scheme is likely to affect the performance of the Scheme.
- Currency Risk – Investments in Falcon Gold Equity Fund are subject to currency risk. Returns to investors are the result of a combination of returns from investments and from movements in exchange rates. For example, if the Rupee appreciates vis-à-vis the US\$, the extent of appreciation will lead to reduction in the yield to the investor. However, if the Rupee appreciates against the US Dollar by an amount in excess of the interest earned on the investment, the returns can even be negative. Again, in case the Rupee depreciates vis-à-vis the US\$, the extent of depreciation will lead to a corresponding increase in the yield to the investor. Going forward, the Rupee may depreciate (lose value) or appreciate (increase value) against the currencies of the countries where the Scheme will invest.
- Country Risk – Country risk arises from the inability of a country to meet its financial obligations. It is the risk encompassing economic, social and political conditions in a foreign country which might adversely affect the interests of the Scheme.

Special Risk Considerations related to Falcon Gold Equity Fund:

- Investors must read these Special Risk Considerations. This section contains explanations of some of the risks that apply to Falcon Gold Equity Fund.

Risks: Investments in securities always involve risks as well as opportunities for capital growth and income. These risks can arise from fluctuations in the price of securities, and - in the case of investments not denominated in the unit of account - fluctuations in foreign exchange rates.

INFORMATION COMMON FOR ALL SCHEMES

Investments in equities involve greater risk than those in fixed-interest instruments of highly rated issuers. Changes in the macroeconomic situation or the climate on the stock market may result in substantial price fluctuations.

In the case of fixed-interest securities and rights, any price fluctuations also depend on the maturities of the fixed-interest investments held for the fund. Fixed-interest investments with shorter maturities generally exhibit lower price risk than fixed-interest securities with longer maturities.

A rise in the general level of interest-rate risk may lead to falling prices in the case of fixed-interest investments, while reductions in interest rates may result in price increases.

The credit risk associated with an investment, i.e. the risk that borrowers will default, cannot be entirely ruled out even if investments are carefully selected.

Investing in the subfund of an umbrella fund may involve additional risk if the umbrella fund can be held responsible for the liabilities of each subfund. This additional risk increases when investments are made in units of different subfunds of a single umbrella fund.

AIG India Liquid Fund, AIG India Treasury Fund, AIG Short Term Fund, AIG Quarterly Interval Fund – Series I & AIG Quarterly Interval Fund – Series II

Risk Associated with Fixed Income and Money Market Instruments:

The performance of the Scheme may be affected by changes in Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems.

Interest rate risk:

As with all debt securities, changes in interest rates may affect the NAV of the Scheme since the price of a fixed income instrument falls when the interest rates move up and vice versa. The effect is more prominent when the duration of the instrument is higher. Hence the NAV movement of the Scheme consisting of predominantly fixed income securities is likely to have inverse correlation with the movement in interest rates. In case of a floating rate instrument, this risk is lower as a result of periodic reset of the coupon.

Spread risk:

Though the sovereign yield curve might remain constant, investments in corporate bonds are exposed to the risk of spread widening between corporate bonds and gilts. Typically, if this spread widens, the prices of the corporate bonds tend to fall and so could the NAV of the Scheme. Similar risk prevails for the investments in the floating rate bonds, where the benchmark might remain unchanged, but the spread over the benchmark might vary. In such an event, if the spread widens, the price and the NAV could fall.

Credit or default risk:

This refers to inability of the issuer of the debt security to make timely payments of principal and / or interest due. It is reflected in the credit rating of the issuer. Hence if the credit rating of the issuer is downgraded, the price of the security will suffer a loss and the NAV will fall. Credit risk factors pertaining to lower rated securities also apply to lower rated zero coupon and deferred interest kind bonds. Lower rated zero coupon and deferred interest kind bonds carry an additional risk in that, unlike bonds that pay interest through the period of maturity, the Scheme by investing in these bonds will realize no cash till the cash payment date and if the issuer defaults, the Scheme may obtain no return on its investment. Separately, underlying assets in securitised debt may assume different forms and the general types of receivables include auto finance, credit cards, home loans or any such receipts. Credit risks relating to such receivables depend upon various factors, including macro-economic factors of these industries and economies. Specific factors like nature and adequacy of property mortgaged against these borrowings, nature of loan agreement / mortgage deed in case of home loans, adequacy of documentation in case of auto finance and home loans, capacity of a borrower to meet his obligations on borrowings in case of credit cards and intentions of the borrower influence the risks relating to asset borrowings underlying securitised debt.

Liquidity risk:

This represents the possibility that the realised price from selling the security might be lesser than the valuation price as a result of illiquid market. If a large outflow from the Scheme is funded by selling some of the illiquid securities, the NAV could fall even if there is no change in interest rates. Illiquid securities are typically quoted at a higher yield than the liquid securities and have higher bid offer spreads.

Investment in illiquid securities results in higher current yield for the portfolio. Liquidity risk is a characteristic of the Indian fixed income market today. In addition, money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.

Reinvestment risk:

This is associated with the fact that the intermediate cash flows (coupons, prepayment of principal in case of securitised transactions or principal payment in case a security gets called or repurchased) may not be reinvested at the same yield as assumed in the original calculations. In case of securitised debt, changes in market interest rates and prepayments may not change the absolute amount of receivables for the investors but may have an impact on the re-investment of the periodic cash flows that an investor receives on securitised papers.

Settlement risk:

Different segments of Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are uninvested and no return is earned thereon. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Schemes portfolio, due to the absence of a well developed and liquid secondary market for debt securities, may result at times in potential losses to the Scheme in the event of a subsequent decline in the value of securities held in the Scheme's portfolio.

Market risk:

Lower rated or unrated securities are more likely to react to developments affecting the market and the credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated or unrated securities also tend to be more sensitive to economic conditions than higher rated securities.

Pre-payment risk:

This is most relevant to securitized debt and is further also highlighted in risk factors associated with investing in securitized debt in the following pages. In the event of pre-payment of the underlying debt, investors may be exposed to changes in tenor and yield.

- In addition to the factors that affect the values of securities, the NAV of Units of the Scheme will fluctuate with the movement in the broader fixed income, money market and derivatives market and may be influenced by factors influencing such markets in general including but not limited to economic conditions, changes in interest rates, price and volume volatility in the bond markets, changes in taxation, currency exchange rates, foreign investments, political, economic or other developments and closure of the stock exchanges.
- Investments in different types of securities are subject to different levels and kinds of risk. Accordingly, the Schemes' risk may increase or decrease depending upon its investment pattern. For example, investments in corporate bonds carry a higher level of risk than investments in Government securities. Further, even among corporate bonds, bonds which have a higher rating are comparatively less risky than bonds which have a lower rating

Applicable to ALL Schemes except AIG World Gold Fund:

Risk Associated with Derivatives

Derivatives product are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Some other risks associated with Derivatives include but not limited to the risk of mispricing or improper valuation; the inability of derivatives to correlate perfectly with underlying assets, rates and indices; credit risk; liquidity risk.

Risk Associated with Short Selling and Securities lending

The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

Applicable to AIG India Liquid Fund, AIG India Treasury Fund, AIG Short Term Fund, AIG Quarterly Interval Fund – Series I & AIG Quarterly Interval Fund – Series II

Risk associated with investing in securitised debt:

Some Risk associated with securitised debt are Credit Risk; Limited Liquidity & Price Risk; Limited Recourse, Delinquency and Credit Risk; Risks due to possible prepayments and charge-offs and Risk of co-mingling of funds.

Applicable only to AIG Quarterly Interval Fund – Series I & AIG Quarterly Interval Fund – Series II

Risk Associated with Listing of units:

INFORMATION COMMON FOR ALL SCHEMES

RISK MITIGATION MEASURES

For Equity Schemes (AIG India Equity Fund and AIG Infrastructure and Economic Reform Fund)

AIG Investments equity team follows a comprehensive equity investment process. Our core investment philosophy is pure bottom up stock selection which means that we spend considerable time in understanding the company's business prospects, evaluate its management and determine a fair valuation before buying it.

We recognize that financial metrics to evaluate opportunities will vary based on the stage of the company's development. Therefore, as a process, we categorize our investment universe into four categories of stocks based on the company's development stage (economic growth cycles), test the company's valuations, do the consensus check with the sell side analysts and finally rank the company. In short this process ensures a comprehensive review of all the companies in the investment universe. It reduces ad-hoc decision making and ensures discipline as no company can be bought in the portfolio if not researched and covered in our investment universe.

There are systems and procedures in place to monitor Regulatory and internal limits on a regular basis.

Further, the internal Investment committee meets regularly to provide overall guidance for the investment management process. The committee periodically reviews investment strategies & philosophy and adherence to scheme objectives and restrictions.

For Debt Schemes (AIG India Liquid Fund, AIG India Treasury Fund, AIG Short Term Fund, AIG Quarterly Interval Fund – Series I & AIG Quarterly Interval Fund – Series II)

The investment team of the AMC takes an active view on the key drivers affecting interest rate scenario. Investment views / decisions will be based on an analysis of macroeconomic and other relevant factors to estimate the direction of interest rates and level of liquidity, in an attempt to optimize the risk adjusted returns on the portfolio. Portfolios are rebalanced on a dynamic basis as per the objectives of the relevant scheme to optimize returns whilst managing risks at all points in time.

The credit quality of the portfolio is maintained and monitored using in-house research capabilities as well as inputs from external sources such as independent credit rating agencies.

Whilst all risks such as interest rate risk, liquidity risk, default risk, reinvestment risk etc cannot be eliminated, they may be minimized through diversification, research and effective use of hedging techniques. The AMC would incorporate adequate safeguards to minimize above mentioned risks in the portfolio construction and management process.

To achieve this, an internal Investment Committee meets regularly to provide overall guidance for the investment management process. The committee periodically reviews investment strategies & philosophy and adherence to scheme objectives and restrictions.

Applicable only for AIG India Liquid Fund, AIG India Treasury Fund, AIG Short Term Fund: The liquidity is normally maintained by investing in securities that would result in staggering the maturity profile of the portfolio, and by maintaining appropriate levels of cash from time to time. In addition, a significant portion of the portfolio investments are made in debt instruments that have reasonable secondary market activity.

For Fund of Funds Scheme (AIG World Gold Fund)

The scheme predominantly invests in units of Falcon Gold Equity Fund, a mutual fund domiciled in Zurich. The portfolio of the underlying fund is diversified across stocks, countries and thus across number of currencies. This diversification ensures liquidity, minimizes concentration risk in the portfolio and reduces currency risk to some extent.

Payment from a person other than the beneficiary is considered as Third Party. Exceptions are allowed for the following cases:

- o Payment by Parents/Grand-Parents/related persons** on behalf of a minor in consideration of natural love and affection or as gift for a value not exceeding ₹ 50,000/- (each regular purchase or per SIP installment). However the restriction of ₹ 50,000/- as mentioned above, will not be applicable for payment made by a guardian whose name is registered in the records of Mutual Fund in the folio.
- o Payment by Employer on behalf of employee under Systematic Investment Plans or lump sum / one-time subscription through Payroll deductions.
